ChironAI™ Clinical Decision Support CDS

CLINICAL DECISION SUPPORT · GA

It runs the encounter. *You sign the chart.*

Chiron gathers the record, reads the labs, checks safety, reasons the differential and drafts assessment, plan and orders for your signature. Every tool-call is visible, the reasoning streams as it happens, and nothing enters the chart until a physician attests it.

ILLUSTRATIVE OF THE PRODUCT UI · SYNTHETIC CASE DATA, NOT FROM ANY REAL PATIENT

Visible, named tool-calls

Seventeen tenant-scoped, audited, approval-gated tools — each call shown as it is made.

A calibrated differential

Six-tier confidence with Bayesian percentages. "Cannot exclude" is a real answer, not a forced guess.

Lab values can't be invented

A deterministic layer extracts the numbers. Chiron may interpret a value; it cannot invent a digit.

Shaped to your country

Reasoning, medicines and safety text tailored to the clinic's country and the patient in front of you.

490+	17	7
CUSTOMER-FACING CAPABILITIES, COUNTED FROM CODE	CLINICAL TOOLS CHIRON CAN CALL	INSTITUTIONAL PARTNERSHIPS, EACH PUBLICLY ANNOUNCED

Draft, then attest

01 · COMMAND
You state the intent
Chiron builds a live plan.

02 · GATHER
Record and labs
Deterministic lab extraction.

03 · CHECK
Safety
Interactions and critical values.

04 · REASON
The differential
Calibrated, streamed live.

05 · SIGN
Physician attests
SHA-256 hash at signature.

Bought by one person, used by another

CMIO / chief of service Governance	The must-review gate and AB 3030 disclosure are enforced on the server; the audit trail is append-only at the database.
CISO / security Controls	Row-level tenant isolation, AES-256 on sensitive fields, PHI de-identified in reasoning, no path to training.
Attending · radiologist Daily use	Pre-visit interviews before patient one, critical labs flagged, and a five-check structured radiology review.

Country-tailored
Set up with cited national references for the US, UAE, Saudi Arabia, Pakistan, India and Bangladesh.

Your data stays yours
It stays in your tenant and never enters a training pipeline.

GA since Sept 2025
For hospitals, clinics and health-sciences institutions.

The AI reasons; *the clinician decides.*

Priced per clinician and scoped to the deployment. Tell us the workflow you want to see — a person replies within two business days to book a 45-minute session.
