EliAI™

MRF · GENERALLY AVAILABLE

Price only what *the evidence will carry.*

For funds that buy medical receivables at a discount and collect from the settlement. EliAI MRF underwrites, perfects, services and realises receivables secured by liens on personal-injury and workers' comp matters — every figure sourced.

Worked valuation SYNTHETIC FILE

● EVERY NUMBER SOURCED

FOUR READINGS, ONE FILE

Was the treatment defensible?	Clinical
Is the lien enforceable?	Legal
How will the carrier behave?	Claims
What is the money worth after the wait?	Finance

THE VERDICT

One number, with its four traces attached

Thin cohort? A range — and no price.

ILLUSTRATIVE · SEE THE FULL WORKED VALUATION AT ELIGRID.AI/WORKED-VALUATION

Every number sourced

Each figure names the comparable it came from. An uncited digit is quarantined before it reaches a verdict.

It refuses to guess

A thin cohort produces a range and no price. The database won't store a priced mark without a band.

Reconstructable

Cohort, query, pinned engine and seed are recorded. Marks are superseded, never overwritten.

The book marks itself

Status is verified continuously, and every event re-marks the receivable.

4	12–36 mo	8
READINGS ON ONE FILE, ONE NUMBER	TYPICAL WAIT BEFORE THE SETTLEMENT PAYS	PUBLISHED FACTORS THAT SET A QUOTE

One spine, the whole lifecycle

01 · SCORE
The universe
Which files are worth reading.

02 · READ
Four readings
Clinical, legal, carrier, time.

03 · VALUE
One number
With its four traces attached.

04 · PERFECT
Security and funding
Terms, lien, fund.

05 · REALISE
Collect and reconcile
Negotiate, report, redeploy.

Why this edition first. A receivable is a claim on a settlement that hasn't happened yet. An architecture that can price this can price anything in finance that turns on evidence.

Licensed to institutions, scoped to your book

Priced on your book Not by the seat	Quoted from book size and the files that reach a human, landed on a statement of work.
Separable readings Buy what's missing	The four readings are sold separately — take only the ones your desk lacks.
Pilot to fund-wide Rate stated up front	Start with a pilot or a single desk, with the pilot rate stated before you begin.
Deployment Multi-tenant or dedicated	A dedicated deployment in a named region is available, with the same controls.

In production
Running the full lifecycle — not a pilot or a design partnership.

Claimed vs. derived
What the counterparty told you, beside what their own data supports.

Controls in the ledger
Enforced in the data, not in the process — with deletion inside an uneditable ledger.

Bring Eli a file *you already know the answer to.*

Tell us what your desk underwrites. We'll run a worked valuation on a synthetic matter of that kind — nothing of yours leaves your building — and you judge whether you'd have signed it.
